

To whom it may concern,

I decided to switch from OpenPGP usage to modern age usage and therefore publish my public age key here on GitHub, in this eIDAS conform and [certified](#) .pdf document.

My public age key (secret key is stored on a Yubikey):

age1yubikey1qdf6fmuk6qqzlhzh69yw5y6eqzhxdkvk3qdcnz77hf8qtqrwpptm5tfyp06

You will find age on GitHub at the following link:

<https://github.com/FiloSottile/age>
